

AFE Management System
 PERC Morning Report Software
 PASS Project Acceleration Software
 RS Resource Scheduler Software

Advanced Design

- Three-tier client/server design consisting of a thin client, a database server, and an Oracle or SQL Server database.
- Uses high-end database features, such as stored procedures, foreign key constraints and triggers.
- Advanced error checking routines automatically emails errors to the Bengal Development support team.
- Security is achieved both at the application level as well as the database level.

Flexibility

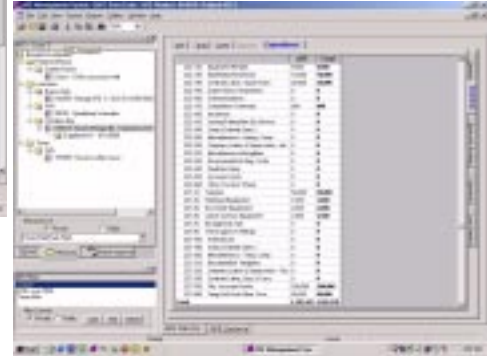

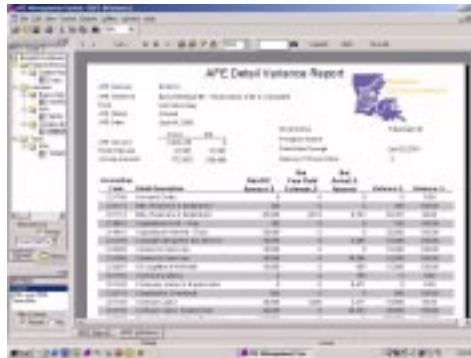

- Account codes are effortlessly imported into the system, allowing conformity with your company's accounting system.
- All daily activity items are completely configurable to your company's needs.
- Crystal reports provides the reporting engine with the flexibility of adding your own custom reports.
- Extensions may be written to extend the functionality of the system.
- Lookup tables are used to increase data integrity of the system, and lookup data is totally customizable.

Efficiency

- Advanced searching, filtering and grouping features allow the user to query through the data and display it in the most reasonable fashion.
- Electronic routing through your email greatly speeds the approval process.
- Approval is available through your Intranet, making approval possible from any location with an Internet connection.

AFE Management System

"Tame every aspect of your AFE process."

"I feel that the AFE Management System is by far the best capital management system for the oil & gas industry that is in existence today."

Debbie Moreau
 Senior Planning Analyst
 Ocean Energy

"We have drastically reduced the time it takes to prepare and approve an AFE, providing more time to focus on the core functions of Ocean Energy."

Mario Coll
 VP Operational Planning/CIO
 Ocean Energy

The **AFE Management System** is a corporate-wide solution for all your AFE needs, from AFE creation and setup, to electronic routing and online approval, to daily tracking and cost analysis. It can be customized to your company's needs, including AFE types and chart of accounts, economic indicators, reporting and business rules. It can also be integrated into your existing software infrastructure, leveraging the power of your company's existing systems to combine your accounting, economics and daily reporting data.

Using the **AFE Management System** and your company's Intranet, an AFE can be electronically routed to a group of approvers and team members for their approval. Users receive emails informing them of pending AFEs along with a link to the company Intranet. The link redirects them to the Web Approval, where they can view the AFE's information, review any attachments to the AFE and electronically approve the AFE.

The AFE Management System can display any data stored in its database in easy-to-read reports using the Crystal Reports engine. The system also allows users to build custom reports that may be added to the system without the intervention of any custom programming.
