Digital Photomicroscopy

“Providing high-resolution digital microphotographs...”

Epoch Well Services, Inc. is proud to announce the introduction of **Digital Photomicroscopy** services. Epoch is able to provide high-resolution digital microphotographs of cuttings samples from the wellsite. These digital files can instantly be viewed and sent through various ways, including myWells.com, email, End of Well Reports, mudlogging reports, CDs, etc. These images are easily portable and viewable on virtually any modern computer.

Epoch’s **Digital Photomicroscopy** system is composed of a Leica GZ6 Stereo Zoom microscope with a Pixera Digital Camera attached for superior image quality with high resolution. The magnification range is from X6.7 to X40 with a X10 lens. The images can be put to scale and have annotations placed on them to better explain the samples.

Digital Photomicroscopy services are available wherever Epoch Digital Mudlogging Services are in use. Please contact an Epoch representative for additional information on this service.
